Five Year Pressure Test for above Ground and Below Ground Type 3 Hydrant Fuel System Forbes Field ANG base 5920 SE Coyote Drive Topeka Ks 66619-5370

Please provide Quote to MSgt Michael Molter by 16:00 4/13/2010.

Perform a hydrostatic pressure test every five years on all underground fuel transfer pipelines (product is typically the test media for this test) A hand-operated hydraulic pump, or equivalent with built in reservoir tank supplies hydrostatic pressure. The hydrostatic test may be conducted using a dual-pressure temperature compensating pressure test conducted at the same pressure specified by UFC 3-460-03 para 2.3.3.2.2 with MAJCOM fuels engineer approval. The test vendor must have and independent third-party review of the test. Actual procedures will be provided upon request.
